## Quality Assurance

Services Limited

### Implementation of SMS in Part 145 – Regulation (EU) 2021/1963

With the publication of Commission Implementing Regulation (EU) 2021/1963 on 8<sup>th</sup> of November 2021 and the application date of 02<sup>nd</sup> December 2022 into Member State and Foreign approved Part 145 organisations, many UK based maintenance organisations are preparing for development and implementation of a Safety Management System. For those with Foreign approved maintenance organisations operating in a Member State, this is now mandated and is subject to EASA oversight. All findings raised against this regulation must be resolved and closed by the 02<sup>nd</sup> of December 2024.

Audits carried out against Continuing Airworthiness Regulation (EU) 1321/2014 Annex II Part 145 now include subsections 145.A.120 thru' 145.A.205. This provides oversight of levels of Management Systems previously audited within Air Operations and Part CAMO.

QAS Ltd provides a comprehensive oversight and SMS development plan for existing Part 145, UK or Foreign approved organisations, who are considering the process for implementation of Commission Implementing Regulation (EU) 2021/1963. This includes development of a compliant MOE, oversight audits, identification and correction of gaps and provision of training in Management System requirements.
